Same job, different tool

Find the job in the left column, then read across to the tool that fits who is doing it. Letters match the overlap chips on the family map.

Other AWS service outside SageMaker AI Closed to new since Jul 30, 2026

THE JOB	NO-CODE / VISUAL Analyst · business user	CODE-FIRST IN SAGEMAKER AI DS · MLE	DATA ENGINEERING & BIG DATA DE · platform team	FULLY MANAGED BY AWS no model or cluster to run	RULE OF THUMB
A **Where you work**	**Canvas**	**Studio** (JupyterLab, Code Editor, RStudio) **Notebook Instances**	**Unified Studio** **EMR Studio** Other AWS service	**Studio Lab** Closed to new	Data, analytics, and ML teams sharing projects: Unified Studio. An ML-only team: Studio.
B **Prepare data**	**Data Wrangler** (in Canvas) **Glue DataBrew** Other AWS service	**Processing Jobs** **pandas or PySpark** in a Studio notebook	**Glue ETL** and visual ETL Other AWS service **EMR** (Spark), **Athena** SQL Other AWS service	—	Analysts: Data Wrangler or DataBrew. Data scientists: notebook, then Processing Jobs to make it repeatable. Shared or large-scale pipelines: Glue or EMR.
C **Build a classic ML model**	**Canvas**	**Autopilot** AutoML API **Training Jobs** with built-in algorithms or your script	**Spark MLlib** on EMR Other AWS service	**Rekognition, Comprehend, Textract** (pre-trained) Other AWS service	Check for a pre-trained AI service first. Need a custom model: Canvas for analysts, Training Jobs for data scientists.
D **Customize an LLM**	**Serverless Model Customization** (guided UI)	**JumpStart** fine-tuning **Training Jobs** or **HyperPod** recipes	—	**Bedrock** fine-tuning and reinforcement fine-tuning Other AWS service	Serving through Bedrock: customize in Bedrock. Need control of weights, training code, or hosting: SageMaker AI.
E **Train at scale**	—	**Training Jobs** (ephemeral) **HyperPod** (persistent cluster) **Training Plans** to reserve GPUs	**Spark-based training** on EMR Other AWS service	—	A run that starts and finishes: Training Jobs. Weeks-long foundation model training with restarts: HyperPod.
F **Serve predictions**	**Canvas** single and batch predictions	**Real-time** , **Serverless** , **Asynchronous** endpoints **Batch Transform**	**Batch scoring in Spark** on EMR or Glue Other AWS service	**Bedrock** API, pay per token Other AWS service	Steady, low latency: Real-time. Spiky: Serverless. Big payloads: Async. A whole dataset at once: Batch.
G **Human labeling & review**	**Ground Truth** labeling UI Closed to new	**Augmented AI (A2I)** review loops Closed to new	—	**Third-party labeling vendors** (AWS Marketplace)	Before training: labeling. After deployment: review loops. New accounts should plan on a vendor.
H **Use a foundation model**	**Bedrock** playgrounds Other AWS service **Canvas** ready-to-use models	**JumpStart** : you deploy and host it on an endpoint	—	**Bedrock** : AWS hosts it, you call an API Other AWS service	Want an API and no infrastructure: Bedrock. Need a model Bedrock lacks, or full control: JumpStart.
I **Track & govern**	—	**MLflow** , **Model Registry** **Lineage Tracking** , **Model Cards**	**SageMaker Catalog** (data and model assets)	—	MLflow records experiments. Registry gates deployment. Catalog controls who can find and use assets.
J **Check model quality**	**Canvas** model analysis (accuracy, column impact)	**Clarify** (bias, explainability) Closed to new **Model Monitor** (drift) Closed to new **Model Dashboard**	—	**Bedrock** model evaluation Other AWS service	Before deploy: Clarify. After deploy: Model Monitor. New accounts may need open-source tools such as SHAP or Evidently.

A dash means no common option for that user. Glue, EMR, and Athena also open inside SageMaker Unified Studio, so data engineers and data scientists can work in the same project.
